

Associate Professor of Architecture Technology (s.s.d. ICAR12) at the Department of Architecture and Industrial Design (D.A.D.I.) of the University of Campania L. Vanvitelli.

His research interests concern the relationship between technology, design and environmental sustainability. In particular, they refer to the following aspects:

- traditional and innovative materials and construction systems, with particular reference to the diagnosis of building degradation;
- project strategies for the technological and environmental requalification of housing and school buildings;
- relationship between technological innovation and environmental sustainability in the different phases of the building process.
