Her research activities, made within the research group led by Prof. Francesco Rossi (until 2017) and now by Prof.ssa Annalisa Capuano, are mainly focused on the following topics: pharmacovigilance, pharmacoepidemiology, prescriptive appropriateness and clinical research both pre- and postmarketing. Specifically her research activities mainly aim to assess the drug tolerability profile, to evaluate specific adverse drug reactions, to assess the prescriptive appropriateness through drug utilization studies and to evaluate the drug risk/benefit ratio with the application of several analytical methods. Finally her research activities are directed also on the evaluation of the pharmacological activity of several drugs using in vivo diseases models. She has been attended from April to October 2011 to the Pharmacology Unit at University Hospital Vall d'Hebron in Barcelona (led by Prof. Joan-Ramon Laporte) to carry out a research activity within the European project Pharmacoepidemiological Research on Outcomes of Therapeutics by a European Consortium (PROTECT) that comprises a programme to address limitations of current methods in the field of pharmacoepidemiology and pharmacovigilance. Specifically she has been involved in a preliminary research on drug consumption sources of information among different European countries for several selected drugs, such as antiepileptics, to find out about their feasibility to be used in pharmacoepidemiological research.
